

## Quarter 2, 2015

While the housing market continues to improve and job growth remains strong, the headwinds facing many global economies left equity values vacillating up and down without any significant movements in either direction during the second quarter. Toward the quarter's end, attention was once again was on Greece. Although Greece's gross domestic product is less than that of Connecticut, the uncertainty regarding their ability to make the necessary economic reforms to remain solvent and remain a part of the eurozone, are in doubt.

Domestically, large company stocks (S&P 500) and small company stocks (Russell 2000) increased 0.28% and 0.42% respectively. The strongest performing sectors within the S&P 500 index were health care, consumer discretionary and financials, which returned 2.84%, 1.92% and 1.72% respectively. Industrials and energy were the weakest performing sectors, falling 2.23% and 1.88% each over the quarter.

The U.S. dollar depreciated during the second quarter, increasing returns for investors investing in foreign markets. A decrease in value of the U.S. dollar enhances foreign securities returns to U.S. investors while an increase in the dollar's value reduces them. For the quarter the MSCI EAFE Index (in U.S. Dollars) increased 0.62% while the MSCI EAFE Index (in Local Currency) decreased 1.82%.

Fixed income yields rose in the second quarter as bond prices fell. Yields on 10 year Treasury notes jumped from 1.87% at the beginning of the quarter to 2.35% by the end. For the quarter the Barclays U.S. Aggregate bond index (a blended bond composite) declined 1.76%.

On June 17 the Federal Reserve's Open Market Committee left the interbank lending rate target (federal funds rate) unchanged at 0% to 0.25%. In the official statement following the meeting the Fed upgraded its assessment of the economy pointing to improvements in consumer spending as well as the housing and labor markets.

That last rate increase was in June of 2006. We do not know how much longer the Fed will maintain the current rate. The important question is how fast the Fed will tighten once they begin to increase rates. Language from the Fed suggests that they will do so carefully taking a "balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent."

Long term, we continue to believe that well diversified global stock and bond portfolios, and disciplined investment strategies can continue to provide opportunities for those investors looking for growth.

I welcome your input and, as always, should you have any questions or concerns, or if there is a change in your investment time horizon or financial circumstances that I should be aware of, please contact me at your convenience.

You cannot invest directly in an index. Past performance is not indicative of future results. This material represents an assessment of the market environment at a specific point in time and is not intended to be a forecast of future events, or a guarantee of future results. This information should not be relied upon by the reader as research or investment advice regarding any funds or stocks in particular, nor should it be construed as a recommendation to purchase or sell a security. Investments will fluctuate and when redeemed may be worth more or less than when originally invested. The S&P 500 Index measures the performance of large capitalization U.S. stocks. The S&P 500 is a market-value-weighted index of 500 stocks that are traded on the NYSE, AMEX and NASDAQ. The weightings make each company's influence on the Index's performance directly proportional to the company's value. The Russell 2000 Index measures the total return of small capitalization U.S. stocks. The Russell 2000 is a market-value-weighted index of the 2,000 smallest stocks in the broad-market Russell 3000 Index. These securities are traded on the NYSE, AMEX and NASDAQ. Investments in smaller company and micro-cap stocks generally carry a higher level of volatility and risk over the short term. The MSCI EAFE Index is the Morgan Stanley Capital International Index and is designed to measure the total return of the developed stock markets of Europe, Australia and the Far East. Investment risks associated with international investing, in addition to other risks, include currency fluctuations, political and economic instability and differences in accounting standards when investing in foreign markets. The Barclays US Aggregate Bond Index is a market-weighted index that includes U.S. government, corporate, and mortgage-backed securities, rated investment grade or higher, with maturities up to 10 years. The Benchmark Composite returns are a weighted average of index data comprised in the following manner. Aggressive Growth is 45% S&P 500, 25% Russell 2000 and 30% MSCI EAFE. Growth is 35% S&P 500, 20% Russell 2000, 25% MSCI EAFE and 20% Barclays US Aggregate Bond. Conservative Growth is 30% S&P 500, 10% Russell 2000, 20% MSCI EAFE and 40% Barclays US Aggregate Bond. Income and Growth is 20% S&P 500, 5% Russell 2000, 15% MSCI EAFE and 60% Barclays US Aggregate Bond. Income is 15% S&P 500, 5% MSCI EAFE and 80% Barclays US Aggregate Bond.
